

The Hazards of Compost and Manure use can now be Eliminated with the use of Guano Plus....

Compost applications to permanent crops are inefficient and not cost effective. They are also inconvenient to apply and not SAFE if you choose the wrong source. Respond to the offer below to receive a FREE, unbiased, educational booklet: "*Guide to selecting organic matter inputs...What every grower should know to save money.*"

However, if you are immediately in the market for a superior, less costly and safer source of organic material please read on: BioScientific's *Guano Plus™* is a, fine filtered, "liquid compost," that contains a balanced content of organic materials that are used by chemical and microbial processes to enhance soil fertility and soil disease suppression. *Guano Plus™* is Safer, Less expensive, cleaner, easier to use, more effective, and has greater versatility than the alternatives of Compost, Manure, Sludge, Cover crops or organic fertilizers. Here's why:

➤ Safer

Guano Plus™ is the only option that is certified through laboratory testing as being free of Plant and Human pathogens that includes, but is not limited too; Salmonella and E. coli. This not only adds safety to your operation, but prepares you for bio-security and Processor residue standards. Because some animal and green manures have diseases in them, some Processors are prohibiting their use. *Guano Plus™* is a sustainable alternative.

➤ Easier to Use

As a liquid, *Guano Plus™* is compatible with fertilizer applications and irrigation injections. Compared to spreading, a combination application will save you a trip across the field and gives more accurate results. Water incorporation to the root zone prevents any fecal matter from being picked up with the harvest.

➤ Save Money

20 gallons of *Guano Plus™* per acre has shown, over the last 13 yrs., the same response as 2 tons of Compost, at a fraction of the cost. In addition to material cost savings, *Guano Plus™*, saves you the

cost of spreading and incorporation. Also, without weed seeds, herbicide costs go down. Without salts soil reclamation cost go down.

➤ Cleaner

Guano Plus™ is fine filtered to 140 microns to ensure the most trouble free applications. There is no foreign materials and absolutely no weed seeds, and It will not plug micro-irrigation systems.

➤ More Effective

Through modern manufacturing techniques the benefits of manures are optimized while omitting the drawbacks of manures. These benefits go straight to the root zone and don't stay on the surface.

➤ Greater Versatility

Guano Plus™ provides benefits that are not available from animal and green manures. Such as, University and local field testing proving *Guano Plus™* ability to reduce nitrate leaching and improved crop uptake, which is good for you and the environment.

GUANO PLUS™ has qualities that are not found in animal and green manures:

GUANO PLUS™

- Low salts
- Easy to handle in liquid form
- More accurate application
- No weed seeds
- Certified pathogen free
- No trash
- Easy to incorporate (Water Run)
- Compatible with liquid fertilizers
- Saves time and money

Manure/Compost

- Higher salt
- Extra cost of application
- Un-uniform applications
- Weed seeds
- Contains pathogens
- Foreign materials
- Extra tillage
- Not compatible
- Costly/time consuming
