FEATURE SHEET

NitriBoost - WP

Nitriboost - WP is a dry 13% wettable powder nitrogen source that is micronized and post screened to 200 mesh. This product has a very attractive cost per unit of applied nitrogen. Nitriboost WP is the only blood and feather meal product, on the market, that is suitable for use through micro irrigation and spray applications. Nitriboost WP offers a new, high analysis option for in-season nitrogen demands!

Nitriboost-WP has these further features and benefits:

- A balanced content of slow release and fast release nitrogen.
- In a form that offers new use/placement/timing options.
- Enhanced release rate nitrogen from micronized blood and feather meals.
- Spray and drip system compatible. Post screened to 200 mesh. Ideally suited to injection through a gypsum machine.
- Fine preparation and high surface to volume ratio of particles enhances release rates. This allows for more uptake with less pounds of nitrogen being applied. (a.k.a. Extremely available)
- Effective agitation is required through all handling and application steps.
- Where less than through agitation is expected, particulate suspension and hydration will be enhanced by the inclusion of a surfactant/wetting agent.
