

# Save Money and Eliminate the Hazards and Hassles of Compost and Manure

EZ-Soil Enhancer is an Organic liquid soil amendment fortified with minerals, micronutrients, kelp, humic acid and beneficial microbes to enhance soil fertility and suppress soil borne diseases. It offers many major advantages over compost and manure.

- Liquid formula fine filtered for micro-irrigation systems. No spreading or tilling costs.
- Bio-available immediately and flows directly to the root zone. No waste or waiting for decay cycle.
- Compatible with liquid fertilizers and most herbicides. No weed seeds, certified **pathogen free**.
- Proven Product. Over 30 years of proven technology.
- Listed for Organic Growing and complies with Leafy Green Marketing Agreement.

## **Safer:**

EZ-Soil Enhancer is certified to be plant and human pathogen free. This adds safety to your operation and satisfies processor residue standards and bio-security demands. Many processors are prohibiting the use of animal and green manures.

## **Easier to Use:**

Liquid EZ-Soil Enhancer is compatible with fertilizer applications and irrigation injections. No spreading or tilling required and a blended application saves a trip across the field and provides for a more accurate placement. No residues of compost or manure to be picked up with the harvest.

## **Cost Effective:**

A rate of 20 gallons of EZ-Soil Enhancer broadcast per acre provides the same response as two tons of compost, at a fraction of the overall cost. EZ-Soil Enhancer goes straight to the

root zone and works immediately. It also enhances the release of nutrients from previously applied organic matter additions; while reducing losses of nitrates to ground water. This provides application flexibility, including mid-season boosts.

## **Specifications:**

EZ-Soil Enhancer is fine filtered to 140 microns to ensure trouble free applications. It contains humic acids, cold water kelp extracts, micronutrients, minerals, beneficial microbes and organic materials.
